No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                  US-09-847-208B-6

Sequence 2, Application US/09479614

Patent No. 6573372

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: McCall, Catherine

APPLICANT: Weber, Eric

TITLE OF INVENTION: Feline Immunoglobulin E Molecules and Related Methods

TITLE OF INVENTION: Feline Immunoglobulin E Molecules and Related Methods

TITLE APPLICANT: Wober, Exic

CURRENT APPLICATION UNMBER: US/09/479,614

CURRENT APPLICATION NUMBER: 60/115,033

EARLIER PILING DATE: 1999-01-07

SEALIER PILING DATE: 1999-01-07

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NOS: 34

SEQ ID NO 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      60 EGELASTOSELTLSQKHWLSDRTYTCQVTYQGHTFEDSTKKCADSNPRGVSAYLSRPSPF 119
